

Over 4 billion people world wide are currently facing severe water scarcity and this number will only increase unless steps are taken now, even in areas with access to surface water or aquifers, to reduce or eliminate dependence on extractive practices.

Designed for use at Fly Ranch, SkyWater is also portable and replicable. From the remote terrain along the U.S./Mexico border to the refugee camps of Syria, Uganda, or Bangladesh to the pueblos hovenes in Lima or cities with aging infrastructure like Milwaukee, Pittsburgh, and Baltimore, based on the simple yet revolutionary premise that clean water, drawn from the very air around us, can be accessible to all, the message of SkyWater is one of hope.

1 out of 3 people globally lack access to clean, sanitary, potable water.

1 out of 3 people globally lack access to proper hand washing facilities.

2 out of 5 people globally are impacted by water scarcity.

1 out of 3 of the world's largest groundwater systems are already in distress.
