

the use of bioluminescent bacteria for lighting at night

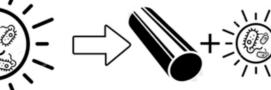

V.fischeri, V.logei, V.harveyi, V.splendida. P.phosphoreum, P.leiognathi.

- living organisms glow bioluminescencetransparent forms with a nutrient medium
- does not require a network connection
- change the nutrient medium once a year, after winter

water collection and purification

purification

the water is collected in a specially designated place and undergoes special cleaning
