

The project are designed in a circle and symbolize the life cycle and the planet.

These circles are the symbol of the Earth, which is moving in its orbit around the Sun and has become green due to the use of renewable sources.

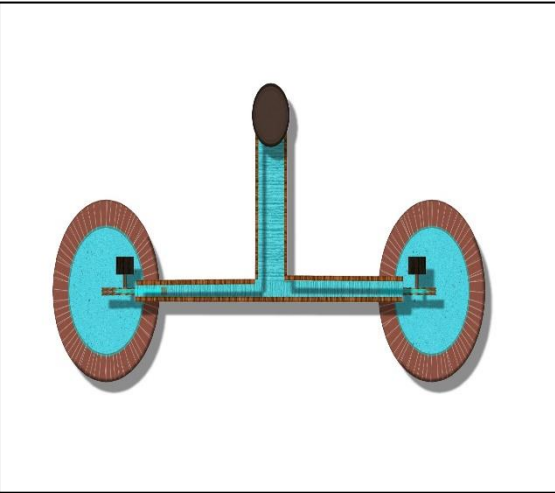

This large circle is also a symbol of the sun, which warms the environment.

The outline, which has a smile on the face of a human face, shows that humans will have a happy and healthy life if they use renewable resources.

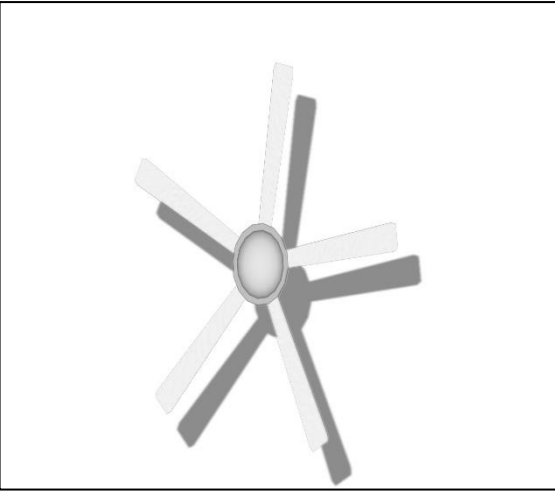

Solar panels used on the project roof that generate 48 kW of electricity.

Water mills used in the project, which generate a total of 12 kilowatts of electricity.

Small scale wind turbines used in the design 14 of them are used in the project and each of them produces 25 kilowatts of electricity.

Smart flooring used in the design The electricity generated from them depends on the amount of physical activity of individuals.
