

LAND ART MASTERPLAN STRATEGIES

Echoing the undulating profile of the river of Rhine and Neckar, four bold and multi-layered design strategy has been developed to guide the implementation that will serve as the organizing element of the park.

1. Amplify the vision of the current masterplan

Create a stronger connection of design elements and open spaces from the Feld Park at south to Citizen Park at northeast framed by art installations, urban agriculture and terrain characterized by sand dunes and dry grassland at both sides. Celebrate the natural heritage and freshwater system of the existing condition to influence orientation.

2. Arrival and Landmark

Capture areas of greatest visibility from the main road and integrate sculptural gateway with renewable energy installation to create a sense of arrival and transition from surrounding. Landmarks that are iconic and visually appealing that will bring many opportunities to the district, attract residents, businesses and visitors.

3. Connected Family of Sculptural Elements

Sculpt a memorable and grand park profile using creative, modular and scalable family of renewable energy installation tied together through a comprehensive open space network. The vitality loop paved with starpath glow and serviced by smart unmanned mini-bus will unify all these elements inside the park.

4. Diversity and Nodes

Organize a hierarchy of flowing public realm with diversified layout of permanent and rotating art installation that stimulate interest and provide multiple offerings fitting to public's constantly evolving and dynamic appeal. It will employ a unified design and character of art prototypes thereby creating a cohesive design language.

The grand scale of the green energy art system demands multi-layered design solutions that address themes of ecology, cultural sensitivity, sustainability and innovation.

- Legend**
- ① Flower Bud/ Blossom
 - ② The Leaf Module
 - ③ Breezeway Corridor Dual Module
 - ④ Gateway Corridor Dual Module
 - ⑤ Triple Petal Module
 - ⑥ Four Petal Module
 - ⑦ Central Storage/ Battery Area with Green Hydrogen Plant Module
 - ⑧ Arrival Node
 - ⑨ Vitality loop
 - ⑩ Urban Farm Corridor
 - ⑪ Swale/ Retention Pond
 - ⑫ Grand Central Multi-Purpose Lawn
