

POWER NEBH

CYCLING WATER ENERGY

Power Nebh rethinks the traditional steam industry used since the 18th century. Resignifying these industrial principles to develop a form of clean energy that uses gray water and solar radiation as inputs. Through an experiential cloud atmosphere, it generates awareness of the energy of the water cycle. It is a modular and scalable urban device for the citizens of Mannheim. At the time, Power Nebh supplies a quarter of the energy required by the new development of the Spinelli district.
