

Farm_Craft

Farm Craft is steel pavilion treated as extension of U-halle. In design are used different ecological technologies produced from sun earth and wind.

The idea behind the revitalization of the area is based on modularity, economy, sustainable development, environmental friendliness and adaptation. The main hall consists of modular construction elements, which affects the form and economy of the building. The idea of sustainable development and environmental friendliness influenced the arrangement and planning of facilities to meet the criteria of satisfying the needs without harming the environment in the business and social model. The building and the area of the study are adapted to changing climatic conditions. The modularity of the building allows to adopt various modules depending on needs.
