

North-South Transect

The North-South transect is generated by two converging walls that travel longitudinally through the site. As the walls approach one another, they gradually descend into the Earth, to form a canyon within. Outside of the walls, the Eastern face of the transect becomes a shaded niche, catching the day's prevailing wind gusts. The Western face is an opposite experience — one that is sheltered from the wind and oriented towards the afternoon sun.

Upper Level / 360 x 100 m
Lower Level / 56 x 20 m

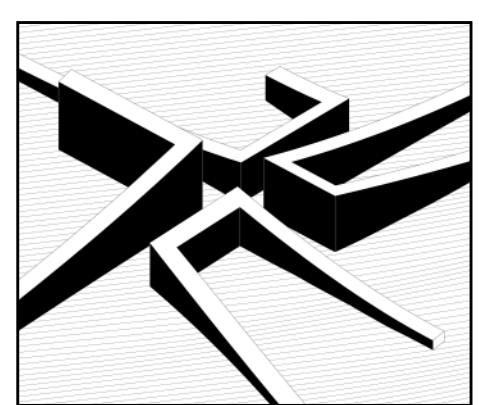

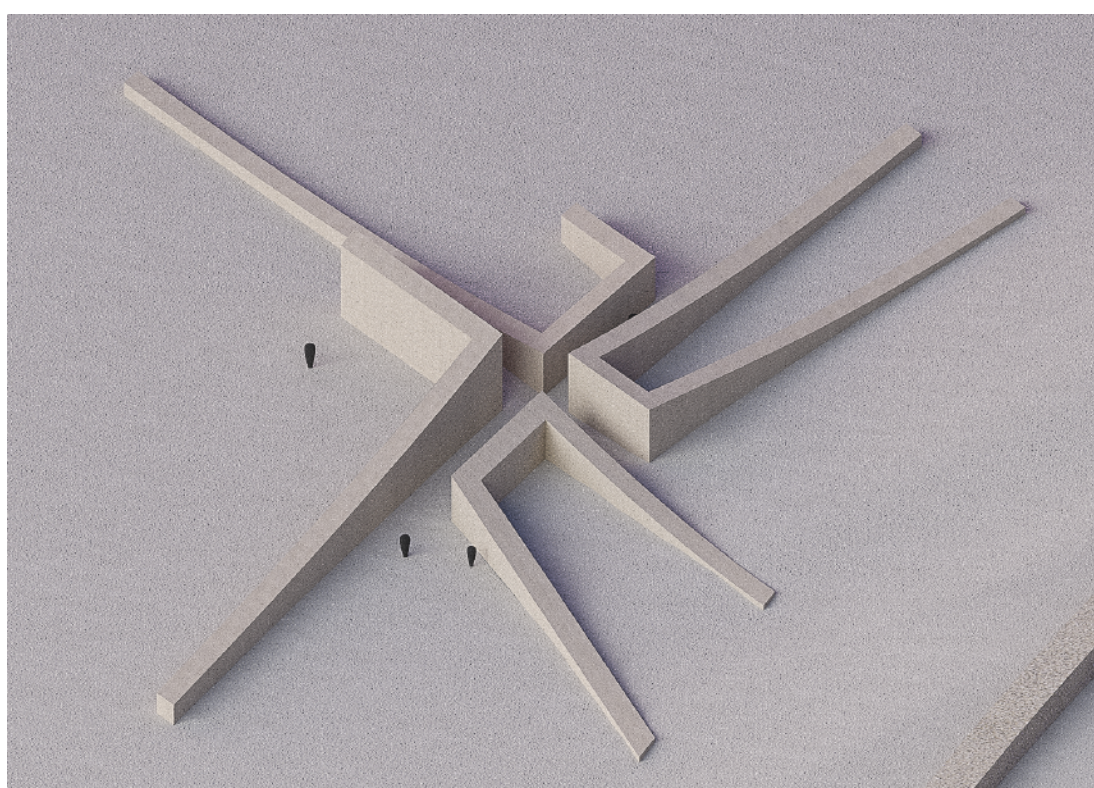

Situators

Being between, beside, or atop walls affords exposure to huge amounts of solar energy or lack thereof, shelter from elements, place of respite, and place to grow or collect. The walls act to situate humans and animals in distinguished territories with the opportunity to quickly alter the energy exposure.

Width / 1 M
Height / 0.5-2 M

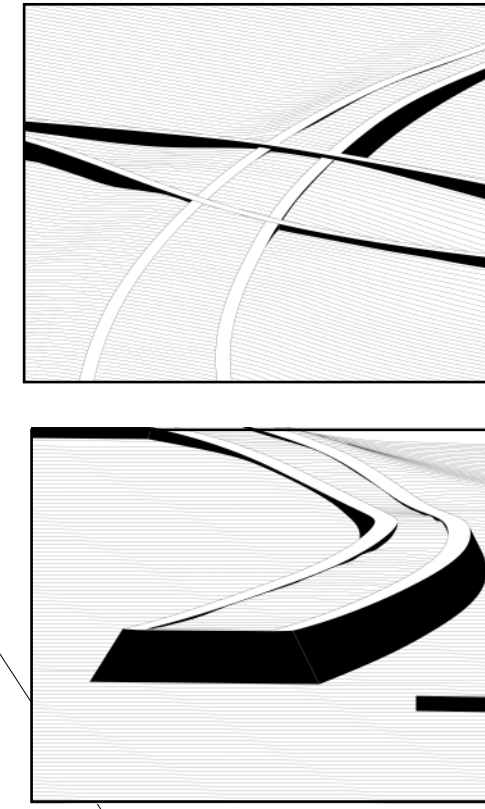

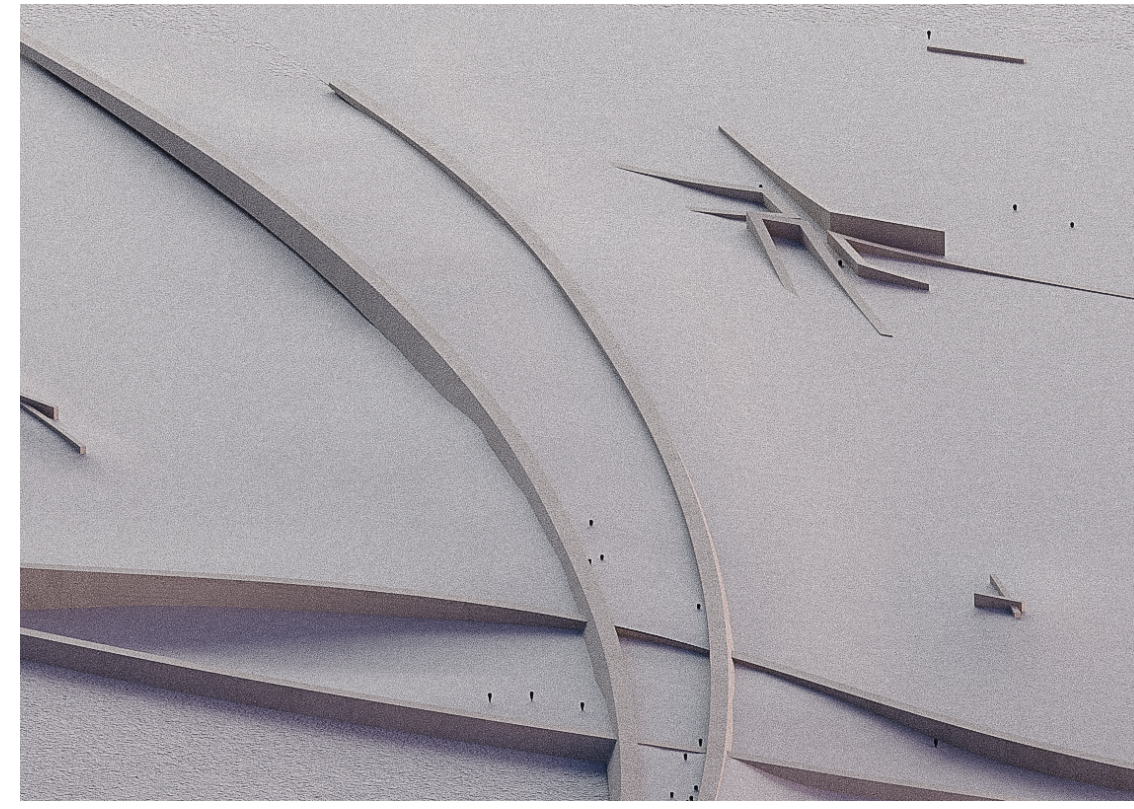

Temperate Walls

The Temperate Walls are located along the North-West residential zone. The walls have been positioned to absorb heat from the rising sun, and redistribute that energy into a microclimate that affords potential year-round growing. The space provokes informal growing possibilities that may translate to alternative approaches in the kleingarten.

Area / 64 x 150 M

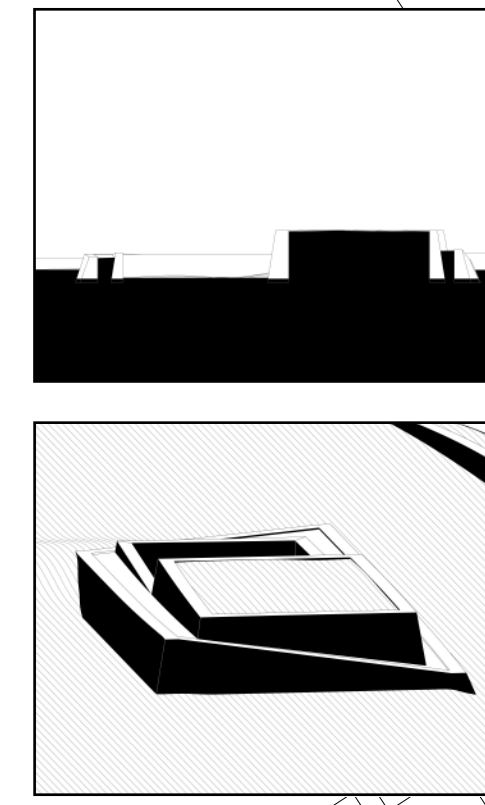

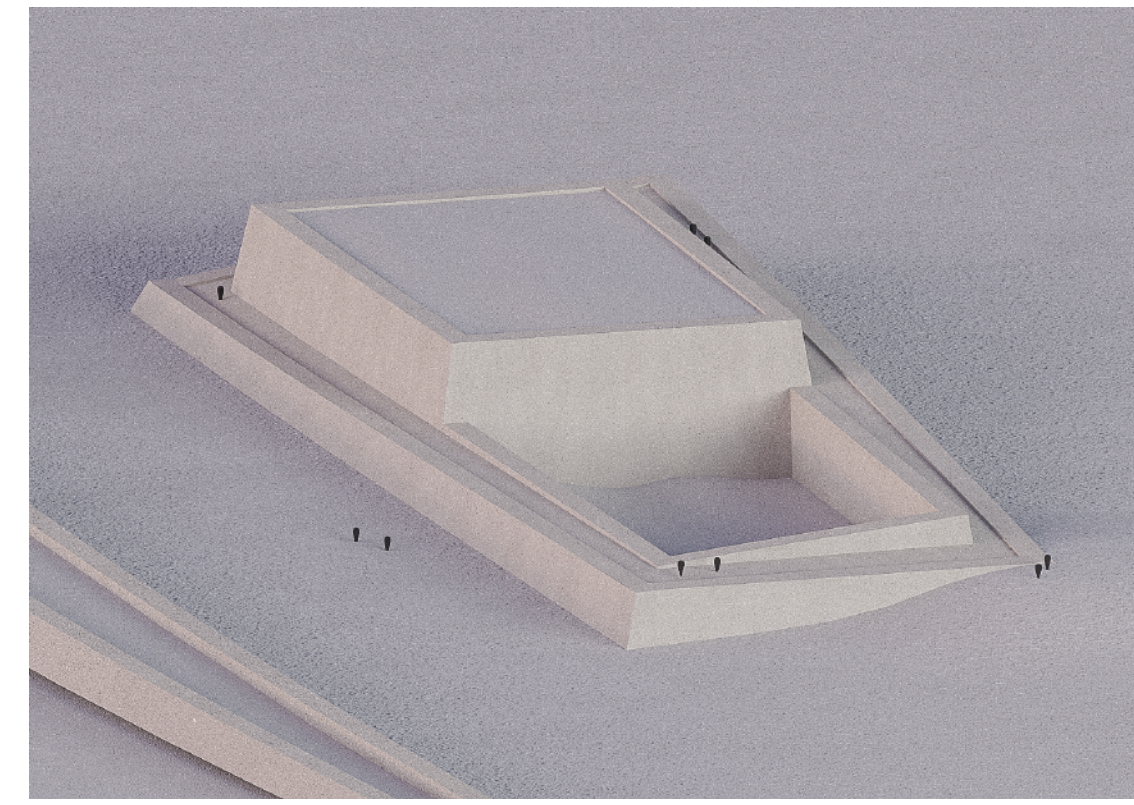

East-West Transect

Centered on the site, branching off the North South Transect is the East West Transect. This affords efficient movement between the distant edges of the landscape, and leads to the Eastern Buttrice. Having the longest spanning walls of our site, this affords unimpeded cool air to flow through the urban landscape, providing shade on the north edge and direct solar energy on the south edge.

Scale

Length: 920 M
Width: 3 M

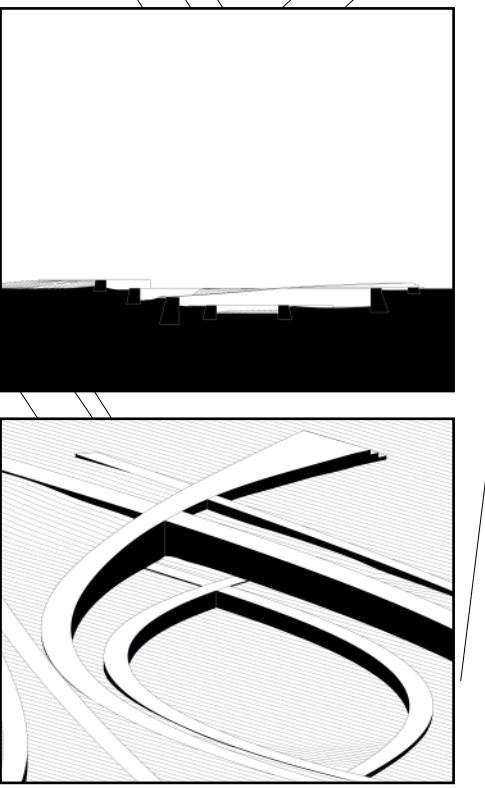

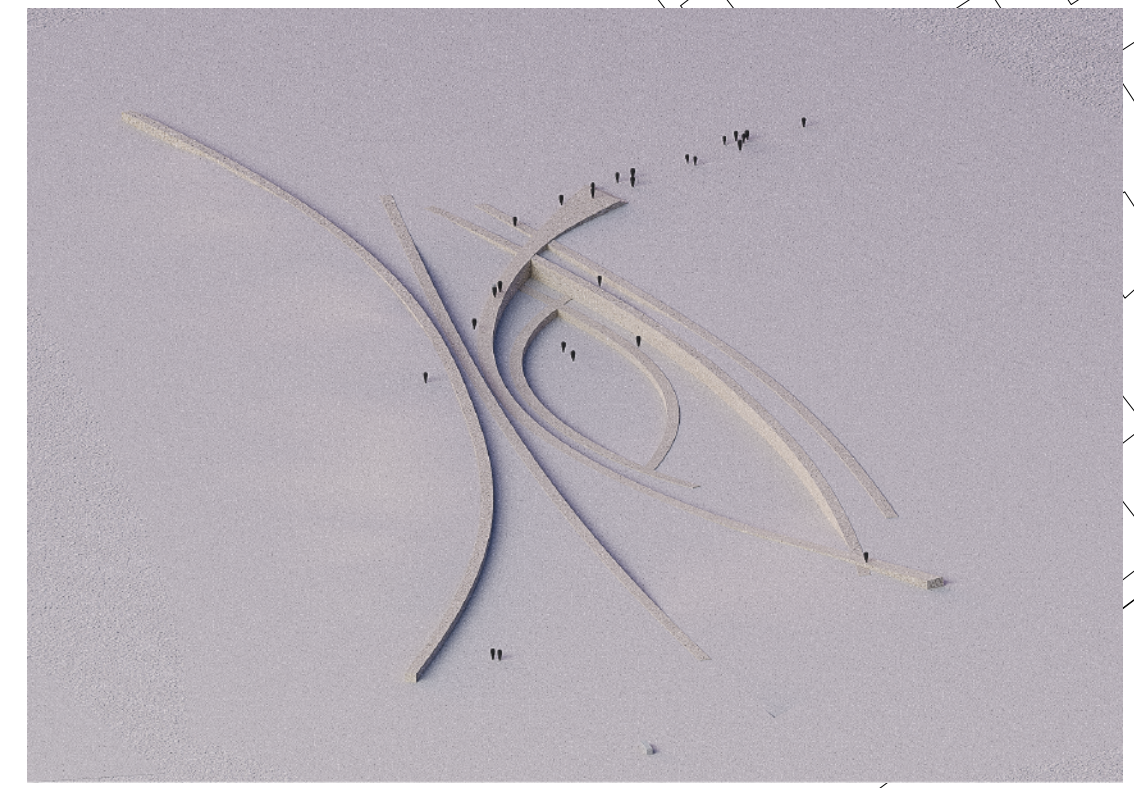

Non-Human Megalith

The Non-Human Megalith is defined by two discrete platforms — one that reaches into the sky, and the other that sinks into the ground. The platforms that are inaccessible to humans allow other creatures the undisturbed agency to shape their space. A pathway encircles the megalith, pushing curious wanderers into a state of constant ascension or descension.

Scale

Area / 156 x 62 m
Wall width / 3m
Perimeter path width / 5m

Doppel-Thingspiele

Doppel-Thingspiele affords opportunities for formal social gathering. Terraces overlap to form a distinct, theater-like space, that rests beneath the ground plane. The structure stretches along the South-East of the park.
